## 1. Preface

---

This document describes specifications of API of Yamaha Extended Control (YXC, hereafter) for Yamaha A/V products. YXC is Yamaha's new communication protocol sent over Ethernet and Wi-Fi to control MusicCast enabled devices. This document describes basic specifications including the way to control power, change input, browse list, retrieve album art. Advanced function including MusicCast link function and others is described in Yamaha Extended Control API Specification (Advanced).

## 2. Definitions

---

- MusicCast  
A function to share music easily among audio devices in multiple rooms at homes
- MusicCast Device(s)  
All products/devices that are equipped with MusicCast functions
- MusicCast Network  
A communication network on which MusicCast Devices join.
  - By multiple MusicCast Devices communicating each other on the same network (=MusicCast Network), all MusicCast devices can be operated using MusicCast App/YXC
- Location  
A unit of MusicCast Network being comprised. Location is expressed as Location ID made up by 32 characters
  - Max number of MusicCast Devices within 1 Location is up to 10
- Link  
A function to share an audio stream among rooms
- Device  
Equal to MusicCast Device
- Room  
A minimum component MusicCast devices can be shown/associated within a MusicCast network

## 3. API Overview

---

- Request Parameters  
Parameter information to inquire. Parameters stated as "required = yes" have always to be specified as one of inquiring parameters, while parameters marked as "required = no" can be omitted or need to be used in special cases
- Response Parameters  
Parameter information to be returned in the body of response (in JSON object format). Not all parameters listed here are always to be returned in a response, depending on each device specs/functions/setup situations. "response\_code" is always returned
  - Note: JSON format data expressions in this document get well formatted for readability, but actual data don't include spaces, intends and carriage return/line feeds
- Base URL  
"<BaseURL>" shown in URI is <http://{host}/YamahaExtendedControl>

- {host} is an IP address of a Device to get controlled
- API version  
Values like “v1” or “v2” specified in URI shows a corresponding API version number. Backward compatibility of APIs always being assured unless specified, all APIs that have equal to or smaller API version number(s) that can be read via “getDeviceInfo” are supported on a Device
- Data size of a sting  
In case a string is specified with its data size, it is a size before JSON escape process

## 11. Events

---

### 11.1. Outline

Events are to notify Devices' status/setup changes immediately to external applications. Events are spread out as UDP unicast.

### 11.2. Conditions

When a request header from an external application contains fields shown below, a Device issues events of status changes. If no event is required, do not include the specified fields:

X-AppName:MusicCast/XXX

X-AppPort:YYY

\*Here XXX stands for an application version, YYY shows event receiving port.

Following is an example of MusicCast CONTROLLER:

X-AppName:MusicCast/1.40(iOS)

X-AppPort:41100

Event notification timeouts in 10 minutes if no further event request is sent from an IP address set as event receiving device. If another request is made within 10 minutes of previous request, the timeout duration is reset and extended.

Event receiving port will be overwritten if a different port number is sent as a request by the registered device using X-AppPort.

### 11.3. Details of event data

Following data sets only which had status/setting change and which are valid on each Device and each zone are to be notified by events.

## 13. Application Notes

### 13.1. Example of List Control

This shows an example when you change a Device's input to USB, browse a USB memory which has folders/files as shown below and playback the target file "File b09.wav" in the Folder B

#### 13.1.1. Preparation before start browsing

Send "prepare\_input\_change" to a Device in order to let it do necessary process before the input change

##### Request

`http://{host}/YamahaExtendedControl/v1/main/prepareInputChange?input=usb`

##### Response

```
{
  "response_code":0
}
```

If input change is expressly necessary, send "setInput" to do so.

##### Request

`http://{host}/YamahaExtendedControl/v1/main/setInput?input=usb&mode=autoplay_disabled`

##### Response

```
{
  "response_code":0
}
```

#### 13.1.2. Retrieving list information (In case max line number is less than or equal to 8)

Use "getListInfo" command to get list information

Here shows how to get it at the root layer

##### Request

`http://{host}/YamahaExtendedControl/v1/netusb/getListInfo?input=usb&index=0&size=8&lang=en`

Response

```
{
  "response_code":0,
  "menu_layer":0,
  "max_line":5,
  "index":0,
  "playing_index":-1,
  "menu_name":"USB",
  "list_info":[
    {
      "text":"FolderA",
      "thumbnail":"",
      "attribute":2
    },
    {
      "text":"FolderB",
      "thumbnail":"",
      "attribute":2
    },
    {
      "text":"File r00",
      "thumbnail":"",
      "attribute":4
    },
    {
      "text":"File r01",
      "thumbnail":"",
      "attribute":4
    },
    {
      "text":"File r02",
      "thumbnail":"",
      "attribute":4
    }
  ]
}
```

## 13.1.3. Layer change

Use “setListControl” to move to Folder B layer. Confirm if the attribute of Response Parameter is selectable as described before.

Request

[http://{host}/YamahaExtendedControl/v1/netusb/setListControl?list\\_id=main&type=select&index=1](http://{host}/YamahaExtendedControl/v1/netusb/setListControl?list_id=main&type=select&index=1)

Response

```
{
  "response_code":0
}
```

Now the current position is moved to Folder B.

#### 13.1.4. Retrieving list information (In case max line number is more than 8)

Use “getListInfo” to get list information.

Here shows how to get it of Folder B.

##### Request

`http://{host}/YamahaExtendedControl/v1/netusb/getListInfo?input=usb&index=0&size=8&lang=en`

##### Response

```

{
  "response_code":0,

With this example, max\_line is 10 so the remaining information more than line 8 is needed.  
To do so, set “index = 8” in the Request Parameter.

#### Request

<http://{host}/YamahaExtendedControl/v1/netusb/getListInfo?input=usb&index=8&size=8&lang=en>

#### Response

```
{
    "response_code": 0,
    "menu_layer": 1,
    "max_line": 10
    "index": 8,
    "playing_index": -1,
    "menu_name": "Folder B",

            "attribute": 4
        },
        {
            "text": "File b09",
```

```

        "thumbnail":"","
        "attribute":4
    },
]
}

```

← Capability bit[2]: Play bit equal to 1

### 13.1.5. Playback a file

Here shows how to specify and playback File b09. Confirm if the attribute of Response Parameter is playable. And the index of Request Parameter is 9.

#### Request

`http://{host}/YamahaExtendedControl/v1/netusb/setListControl?list_id=main&type=play&index=9`

#### Response

```

{
    "response_code":0
}

```

The File b09 in Folder B is now playback.

### 13.1.6. Moving back one layer

Here shows an example of how to move back to one layer.

#### Request

`http://{host}/YamahaExtendedControl/v1/netusb/setListControl  
?list_id=main&type=return`

#### Response

```

{
    "response_code":0
}

```

#### \*Note

getListInfo is the only command that blocks other commands execution. It may take up to 30 seconds to get the whole list information, and all other commands are not accepted all the while

## 13.2. Device Search
